desk details

**R1D**

In our quest to perfect an attractive and economical product, we refined and simplified the structural elements of our legacy desks by using automated laser technology to form the leg set and crossmembers. Joined by using our proprietary *Shear Block* blind fastening system, we can now prepare and assemble an entire 8-seat desk system using only 10 welds and 32 screws delivering all parts 'Flat' to the Job Site where the frames are erected and leveled by two men in under an hour.
